away from the equator and near the poles due to the spherical shape of the earth. The vertical rays heat up the earth more than the inclined rays. Thus, the places near the equator are warmer than the places which are far away from the equator.

Activity

Connect the following places with their latitudes and the temperature observed

Weather		Climate	
Partly sunny 	1. Weather is the study of atmospheric conditions for short duration over small areas.	1. Climate is the study of the average weather condition observed over a long period of time for a larger area.	Warm Climate 
Windy 	2. The weather changes very often ; hour to hour and day to day	2. Climate is more or less permanent and remains the same always.	Monsoon 
Rainy 	3. A place can experience different types of weather conditions in a day. Eg. A day with hot morning can have a rainy noon.	3. A place can experience almost the same type of climate	Wet climate 
Chilly 	4. Weather data is collected every day in the observatories	4. Climate is average of the weather data.	Extreme Climate 
Stormy 	5. Study of weather is called Meteorology	5. Study of climate is called Climatology	cyclone 

City	Latitude	Temperature [In August]
Kanyakumari – Tamil Nadu		
Delhi-India		
Moscow – Russia		

Altitude: Altitude refers to the height above mean sea level. The temperature decreases at the rate of **6.5°C per km of height.** This is called **Normal lapse rate**. So, places at the higher altitude have a lower temperature.

Activity

Connect the following places with Altitude and the temperature
