

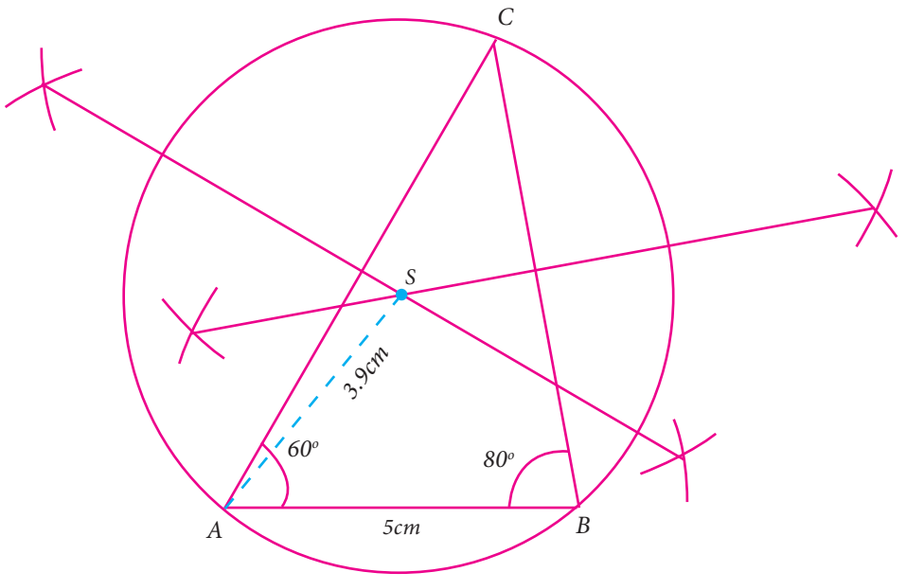

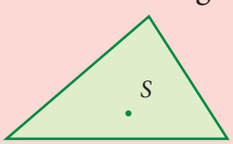

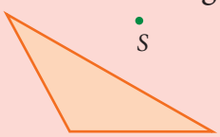

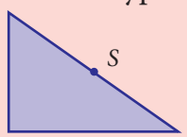

Fig. 4.93

Note

Where do the Circumcentre lie in the given triangles.

	Acute Triangle	Obtuse Triangle	Right Triangle
Circumcentre	Inside of Triangle 	Outside of Triangle 	Midpoint of Hypotenuse 

4.7.4 Construction of the Incircle of a Triangle

Incentre

The incentre is (one of the triangle's points of concurrency formed by) the intersection of the triangle's three angle bisectors.

The incentre is the centre of the incircle ; It is usually denoted by I; it is the one point in the triangle whose distances to the sides are equal.

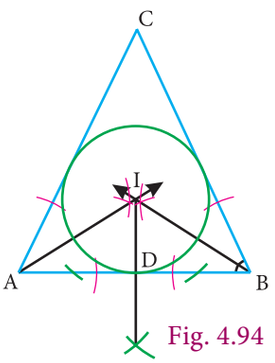

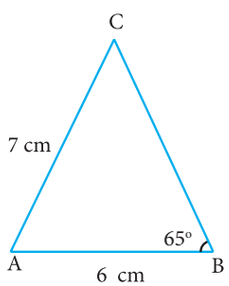

Fig. 4.94

Example 4.15 Construct the incentre of ΔABC with $AB = 6$ cm, $\angle B = 65°$ and $AC = 7$ cm Also draw the incircle and measure its radius.
