## II. Fill in the blanks.

1. Speed is a _____ quantity whereas velocity is a _____ quantity.
2. The slope of the distance – time graph at any point gives _____
3. Negative acceleration is called _____
4. Area under velocity – time graph shows _____

## III. State whether true or false. If false, correct the statement.

1. The motion of a city bus in a heavy traffic road is an example for uniform motion.
2. Acceleration can get negative value also.
3. Distance covered by a particle never becomes zero but displacement becomes zero.
4. The velocity – time graph of a particle falling freely under gravity would be a straight line parallel to the x axis.
5. If the velocity – time graph of a particle is a straight line inclined to X-axis then its displacement – time graph will be a straight line.

## IV. Assertion and reason type questions.

Mark the correct choice as:

a. If both assertion and reason are true and reason is the correct explanation of assertion.

b. If both assertion and reason are true but reason is not the correct explanation of assertion.

c. If assertion is true but reason is false.

d. If assertion is false but reason is true.

1. Assertion: The accelerated motion of an object may be due to change in magnitude of velocity or direction or both of them.

   Reason: Acceleration can be produced only by change in magnitude of the velocity. It does not depend the direction.

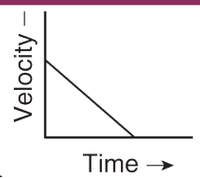

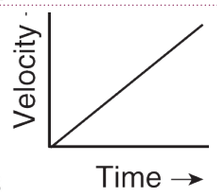

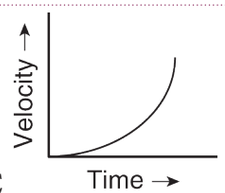

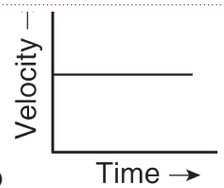

2. Assertion: The Speedometer of a car or a motor-cycle measures its average speed.

   Reason: Average velocity is equal to total displacement divided by total time taken.

3. Assertion: Displacement of a body may be zero when distance travelled by it is not zero.

   Reason: The displacement is the shortest distance between initial and final position.

## V. Match the Following.

| List I | List II |
|---|---|
| 1. Motion of a body covering equal distances in equal interval of time |   A |
| 2. Motion with non uniform acceleration |   B |
| 3. Constant retardation |   C |
| 4. Uniform acceleration |   D |

## VI. Answer briefly.

1. Define velocity.
2. Distinguish distance and displacement.
3. What do you mean by uniform motion?
4. Compare speed and velocity.
5. What do you understand about negative acceleration?
6. Is the uniform circular motion accelerated? Give reasons for your answer.
7. What is meant by uniform circular motion? Give two examples of uniform circular motion.
