- Pharmaceutical chemistry deals with the preparation of drugs and study of the chemical composition, nature, behavior, structure and influence of the drug in an organism.
- Electrochemistry is a branch of chemistry which deals with the relation between electrical energy and chemical change.
- Radiochemistry is the study of chemistry of radioactive and non-radioactive isotopes.
- Dye chemistry is the study of dyes. It provides us information on theory, structure, synthesis and applications of synthetic dyes.
- Agricultural chemistry involves the application of chemical and biochemical knowledge to agricultural production.
- Food chemistry is chemistry of foods which involves analysis, processing, packaging, and utilization of materials including bioenergy for food safety and quality.
- Forensic chemistry applies scienctific principles, techniques, and methods to the investigation of crime.

GLOSSARY

Anaesthetics	Drugs which cause loss of sensation.
Antipyretics	Compounds which are used for the purpose of reducing fever.
Antiseptic	Substance that prevents infections caused by disease causing microorganisms or pathogens.
Antibiotics	Chemical compounds which was produced by many microorganisms (bacteria, fungi and moulds) which inhibit the growth or metabolism of some other disease causing microorganism.
Antacids	These are certain drug formulations which provide relief from burning sensation.
Drug	The chemicals used for treating diseases
Electrochemical Cell	The device that make use of a chemical change to produce electricity or electricity to produce chemical change.
Electrolyte	Solutions of ions or molten salts which can conduct electricity
Pharmaceutical Chemistry	It is the study of drugs and it involves drug development.

TEXTBOOK EXERCISES

A6KEN

I. Choose the correct answer.

1. One Nanometre is
   (a) 10^{-7} metre (b) 10^{-8} metre
   (c) 10^{-6} metre (d) 10^{-9} metre

2. The antibiotic Penicillin is obtained from _____
   (a) plant (b) microorganism
   (c) animal (d) sunlight

3. 1% solution of Iodoform is used as
   (a) antipyretic (b) antimalarial
   (c) antiseptic (d) antacid

4. The cathode of an electrochemical reaction involves _____
   (a) oxidation (b) reduction
   (c) neutralisation (d) catenation
