GLOSSARY

Motion	An object's change in its position.
Distance	Length an object has covered during its motion.
Displacement	Change in the position of an object measuring from its starting position to the final position only.
Speed	Rate of motion at which the object moves (distance/time).
Velocity	Speed of an object in a particular direction.
Acceleration	Change in magnitude or direction of velocity.
Circular motion	Movement of an object along the circumference of a circle or rotation along a circular path.
Centripetal force	Force which acts on a body moving in a circular path and directed towards the centre.
Centrifugal force	Force, arising from the body's inertia, which appears to act on a body moving in a circular path and is directed away from the centre.
Gravity	Force of attraction between an object and the centre of Earth, due to their masses.

TEXTBOOK EXERCISES

I. Choose the correct answer.

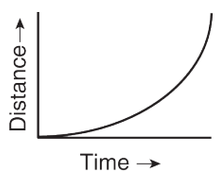

1. The area under velocity – time graph represents the
   a) velocity of the moving object.
   b) displacement covered by the moving object.
   c) speed of the moving object.
   d) acceleration of the moving object.

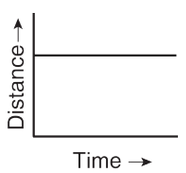

2. Which one of the following is most likely not a case of uniform circular motion?
   a) Motion of the Earth around the Sun.
   b) Motion of a toy train on a circular track.
   c) Motion of a racing car on a circular track.
   d) Motion of hours' hand on the dial of the clock.

3. Which of the following graph represents uniform motion of a moving particle?

a) 

b) 

c) 

d) 

4. The centrifugal force is
   a) a real force.
   b) the force of reaction of centripetal force.
   c) a virtual force.
   d) directed towards the centre of the circular path.
