A-Z GLOSSARY

Bivalent	Homologous chromosomes before their duplication in meiosis.
Centromere	kinetochore or primary constriction.
Chiasma	Point of contact and interchange between chromatids of two homologous chromosomes.
Chromatids	Two identical longitudinal halves of a chromosome which share a common centromere with a sister chromatid.
Diploid	Cell having two complete sets of chromosomes.
Haploid	Cell having a single complete set of chromosome.
Interphase	Resting phase of the cell between two cell divisions.
Isodiametric	Having equal diameter of cells or other structures.
Osteocytes	Bone cells present between the lamellae in fluid filled spaces called lacunae.
Synapsis	Pairing of homologous chromosomes during meiosis.
Tetrad	Four haploid cells arising from meiosis formed from four associated chromatids during synapsis.
