# 3. MELTING POINT OF WAX

## Aim:

To determine the melting point of wax using cooling curve.

## Principle:

The determination of melting point is based on latent heat which is the amount of heat required to change a unit mass (1gm) of a substance from one state to another state without changing its temperature.

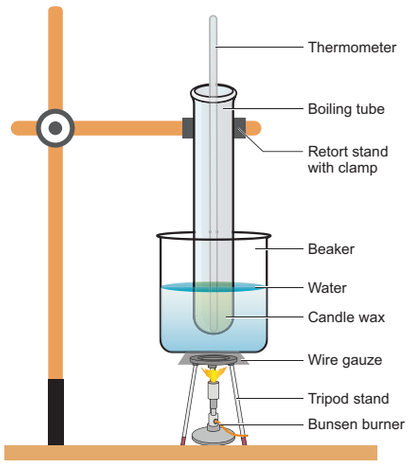

## Materials Required:

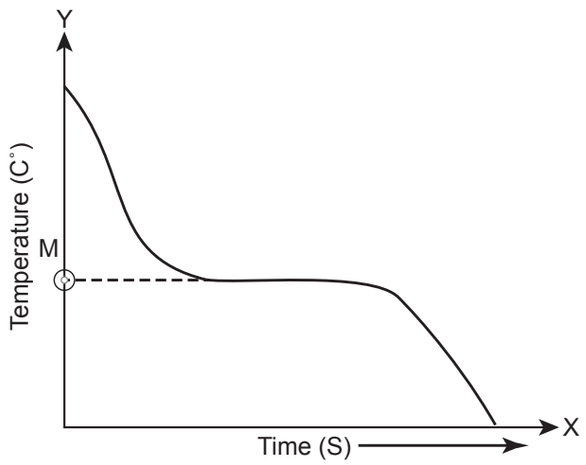

Beaker, burner, thermometer, boiling tube, retort stand and clamp,wire gauze, tripod stand, candle wax, stop watch, bowl of sand.

## Procedure:

- Melt the wax in a warm water bath.
- When the wax is melted entirely, remove it from the bath, dry it and then bury it in sand.
- Record the temperature each 30 seconds while the liquid is being converted to solid.
- At the same time watch for constant temperature at which liquid and solid are present.

Melting point of wax= Constant Temperature over a period of time

## Observation and Tabulation:

| S.No | Time (Second) | Temparature |
|---|---|---|
| | | |
| | | |
| | | |

The temperature at the point M denotes the melting point of wax

**Suggestion:** With the help of ICT corner, the teacher can show the live video of the experiment of melting point of wax using the link www.kau.edu.sa
