Spit

A spit is a ridge or embankment of sediment, attached to the land on one end and terminating in open water on the other end. Spits are common at the mouth of estuaries. Eg. Kakinada spit

Recap

- Levelling of uneven landform is called gradation.
- Weathering is the breaking down of the rocks.
- Physical, chemical and biological are the three types of weathering.
- Running water, glacier, underground water, wind and waves are agents of weathering.
- Soil is the weathered materials covering the earth's surface insitu.

EXERCISE

I. Choose the best answer:

1. The disintegration or decomposition of rocks is generally called as
   a. weathering b. erosion
   c. transportation d. deposition
2. The process of the levelling up of land by means of natural agents.
   a. aggradation b. degradation
   c. gradation d. none
3. _____ is seen in the lower course of the river.
   a. Rapids b. Alluvial fan
   c. Delta d. Gorges
4. Karst topography is formed due to the action of
   a. Glacier b. Wind
   c. Sea waves d. Ground water.
5. Which one of the following is not a depositional feature of a glacier?
   a. cirque b. Moraines
   c. Drumlins d. Eskers
6. Deposits of fine silt blown by wind is called as
   a. Loess b. Barchans
   c. Hamada d. Ripples
7. Stacks are formed by _____
   a. Wave erosion
   b. River erosion
   c. Glacial erosion
   d. Wind deposion
8. _____ erosion is responsible for the formation of cirque
   a. wind b. glacial
   c. river d. underground water.

II. Match the following:

1.	Distributaries	–	glacial action
2.	Mushroom rock	–	action of sea wave
3.	Eskers	–	Lower course of river
4.	Stalactites	–	Aeolian process
5.	Cliff	–	karst topography

III. Consider the given statements and choose the right option given below

1. (i). 'I' Shaped valley is an erosional feature of the river
   (ii)'U' Shaped valley is an erosional feature of the glacier
