Renewable resources	Non-renewable resources
Renewable resources are repplenishable resources are pollution free and environment friendly. These resources take a short time for renewal.	Non-renewable resources are non-replenishable resourcespollute and damage the environment. Million of years are needed for the formation of these resources.
Example: Solar energy, wind energy, water, wood, paper.	Example: Metals, glass, fossil fuels (coal, petroleum, natural gas, diesel)

1.4 Policies for Sustainable Development

Use of Non-conventional Sources of Energy

India depends on thermal and hydro power plants to meet its power needs. Both these sources have an adverse environmental impact. Thermal power plants emit large quantities of carbon dioxide, which pollute the environment.
